MPN Research Foundation is dedicated to funding and advancing original research in pursuit of new treatments—and eventually cures—for essential thrombocythemia (ET), polycythemia vera (PV), and myelofibrosis (MF), blood cancers known collectively as myeloproliferative neoplasms (MPN).

Founded in 1999, MPNRF was the first organization in the MPN space, and is the primary one focused on advancing research.

From our unique position at the intersection among three key stakeholders — patients, researchers and clinicians, and the biotech and pharma industry — we facilitate a collaborative approach to research that elevates the patient voice in research and drug development, brings disease experts together, and accelerates the industry’s understanding of an extremely complex group of diseases.
Our research philosophy and impact

MPNRF takes a portfolio approach to high-risk, high-reward research to achieve the greatest impact with our funding. Our organization is small but mighty, leveraging funding in 3 ways:

**Agile** — We remain agile by adapting to emerging opportunities that arise organically through connections in the community. These are often smaller investments with shorter timelines.

**Deliberate** — We are deliberate in our requests for applications to the research community with defined criteria and predictable cycles.

**Sustained** — We look to the horizon for what’s next with initiatives that need a long-term, multi-year, multi-collaborator approach.

Be part of the solution

Patients, clinicians, researchers, and the biotech and pharma industries all have critical roles to play in advancing MPN research and are all important members of the MPNRF community.

**Patients & caregivers**
Every patient experience is unique and provides new clues for researchers and clinicians. Begin your journey with MPNRF by sharing your story.

**Researchers & clinicians**
In our 24-year history, MPNRF has contributed to some of the most influential MPN discoveries. Learn more about our resources for clinicians and researchers and apply for funding.

**Industry**
Engage with us to ensure that new therapies have the maximum impact on patient outcomes and quality of life. Participate in an annual MPN Roundtable™ or read our *Voice of the Patient* report.

In evaluating promising research to fund, we execute a robust, peer-review process that mirrors the NIH. We leverage the experts in the field to score and make recommendations to the MPNRF board.

As a result, we have a proven track record of investing in meaningful projects. A formal review of studies funded between 2014 and 2019 showed:

- **70%** Achieved outcomes that attracted follow-on funding
- **79%** Resulted in a peer-reviewed publication
- **42%** Advanced to the clinic directly from the investigation or are pre-clinical candidates preparing for trials

The foundation has played a key role in funding some of the more important work that has been done over the last two decades, translating ideas into meaningful impact for patients.
